Question on the DoE:Wicked Addition set
Posted by nielsene - 2013/05/07 16:43

I just received my DOE:WA set, and was a little puzzled by an empty compartment in the styrofoam case. Is there supposed to be an empty slot? I think I see everything that's supposed to be here, but just wanted to check.

Its roughly a 2x2 square piece, slightly thicker than a normal floor. next to the line of 4 curved wall sections.

If you have all of the following, then the slot is extraneous. If you don't, then it was probably supposed to hold whatever is missing.

1x 6" Straight Wall and Archway
1x 4" x 4" Raised Platform w/Removable Lid
2x 6" x 6" Floor Tiles w/Gem Insert
4x Curved Corners
4x Curved Corner Floor Tiles
4x Stone Pillars
2x 2" x 2" Floor Tile w/Stairs Down
2x Upper and Lower Stairs
4x Tentacle Pillars

Yup that's the same list I was comparing it to from the product page and the illustration on the side of the box. So I guess there's just an empty compartment.

I've noticed the same thing (a blank compartment) from time to time too....use to make me crazy when I

was putting sets away as I always thought I was missing a piece or three!

_____

I wonder if something was originally supposed to go there?
