Oh, I see what you're thinking.

Actually, usually the transparencies themselves take care of that. I have an inkjet, but when I went to

Staples they had inkjet and laser transparencies. The ones I got are good for both, actually. One side is smooth, the other is a bit textured, has a bit of friction. It makes the transparency EVER so SLIGHTLY clouded, but not really much. But you put it in the right way round, and the ink sticks fine. No problems.
